THE NEW JORGENSEN DOMICILE

Welcome to our new domicile.

■ We are proud to present our new domicile — a house with a contemporary architecture with emphasis on transparency and openness. The first sod was cut in September 2010 and despite a harsh winter it was ready in May 2011.

One of the aims has been to unite all employees across trade groups on the same floor. Our facilities include transparent offices, canteen with a view, hypermodern production facilities, and lounge area with a logo-shaped coffee bar where our guests can enjoy a cup of coffee while waiting. Our meeting rooms are transparent as well with windows directly to our workshop making it possible for the costumers to see their machinery being constructed.

Together with the change of address we also implemented a new, contemporary logo and corporate visual identity.
